

```
std::formatter< std  
::string >
```

A diagram illustrating the inheritance of a C++ `std::formatter` specialization. It consists of two rectangular boxes. The top box is white with a black border and contains the text `std::formatter< std::string >`. The bottom box is gray with a black border and contains the text `std::formatter< gondola::EventStatus >`. A blue arrow points vertically from the top of the gray box to the bottom of the white box, indicating that the specialization for `gondola::EventStatus` inherits from the specialization for `std::string`.

```
std::formatter< gondola  
::EventStatus >
```
